IMPOSSIBLE?...NOT IN AMERICA!

ON A RECENT FRIDAY EVENING, Over the phone came word from the Philadelphia Army Ordnance of a rush call from North Africa. A totally new kind of petroleum product was needed—a product never before made. Shipment must be made in eight days. How soon could 45,000 pounds be ready? In less than twenty-four hours our chemists, working from a rough description of the material, had an answer.

Dry Weather Curbs Prospect For Va. Crops

FEED OUTLOOK FOR VA.

The total crop acreage for harvest in Virginia this year is about five per cent larger than last year. This is a continuation of the trend to increase acreage, which has prevailed for several years. While the trend is upward, individual crops show some wide variations. The wheat acreage is the smallest in the years of crop reporting in the state. The acreage of soybeans increased 25 per cent this year, which is the largest acreage ever grown in Virginia. The hay acreage is also the largest ever harvested in Virginia. The acreage of corn and oats increased, but barley acreage decreased sufficiently to leave only about 2 per cent net increase for the three feed grains combined. Because yields of oats and barley were light, the prospective production of the three crops now appears to be about the same as last year.

It would seem, from the favorable acreage given for the various crops, that Virginia farmers have no feed worries. But this is far
